Walkthrough

Small mistakes:

1. Wrong reading on the archive
2. Wrong printing of the data on the archive
3. The archive doesn't erase anything
4. validation

Ways of solving these minor issues

1. There might be some source of the problem, even though we are supposed to fix it, we did all the repair we could've done, with no success, so we will try to fix it by using another method.
2. Thanks to the first issue, there's no way that the program allows us to scan data to itself, thankfully after we somehow fix the first issue, we'll be able to fix the second one as well.
3. We haven't implemented the erase function yet, so that's on the table to implement before Wednesday.
4. We were thinking just to use the validation of the inventory but we are implementing it.
